SKiLLDiSPLAY Adventure 1

Advance through the story to acquire TYPO3 CMS editor skills

MAiNZiFiC RiM

THE TUTORIAL

Welcome to the CMS

Chapter I - Mission 01

Background

It's your first day at the Crisis Management Squad and the job seems to be the way you imagined it. Boring.

Contrary to what the flyer on your table claims, the Crisis Management Squad doesn't seem to manage any interesting Crisis at the moment, other than the occasional "oh my god—we ran out of coffee" alert.

At least the working hours are ok and getting into this content management based early warning system for citizens seems to be a piece of cake...

Mission objectives

- ☐ Check out the website of the Crisis Management Service
(make sure your setup is ready, according to the „What do I need to start“ section in the SDA1_Introduction.pdf)
- ☐ Find out what a Content Management System is
- ☐ Find out which Content Management System the Crisis Management Service is using

You have ONE job

Chapter I - Mission 02

Background

So far so good – apparently your job is that of an Editor and you are responsible to “Get the info out there”. The question from some joker beside you if “the info” includes this week’s lottery numbers cracked up the room. For a second.

Then the instructor showed you an image of a 6.8-ton saurus, having his way with the home of some local residents - the “Schmiedingers” family.

The reassurance, that 80 % of the family are still save to this day only cheered up some of the participants who aren't very quick with doing the math and drawing according conclusions.

This is serious business. More serious than you initially thought...

Mission objectives

- ☐ Find out about your personal role (Editor) and those of your colleagues (Integrator, Developer) – every second might count when to decide whom to contact
- ☐ Make sure you are up to date with your tools for fulfilling your role as Editor

Man your stations

Chapter I - Mission 03

Background

The knowledge of your fellow participants has varied a bit, but eventually everyone got up to speed. The instructor assigns you workstations and explains: "You'll be working with the real system, but for training purposes nothing you publish will be going live for now."

Everyone is responsible for a certain district, as the threat level in case of a crisis varies geographically.

Mission objectives

Set up your personal account and find your bearings in the System:

- ☐ You need to understand what a "Front End" and what a "Back End" is
- ☐ Set a secure password for your account
